

MINDCARE

Project Description — One Page

Project Overview

MindCare is a Flutter/Dart mobile application focused on everyday mental wellness and self-care. It combines mood tracking, meditation, Unwind activities, relaxation audio, journaling, analytics, profile management and progress tracking in one application.

Main Features

- **Home:** personalized greeting, mood, streak, weekly activity, journal and quick actions.
- **Meditation:** timed sessions, audio playback, pause/resume and completion tracking.
- **Unwind:** calming mindfulness and relaxation activities.
- **Listen:** ambient, mindfulness, sleep/relaxation and focus categories.
- **Journal:** personal reflection and journal functionality.
- **Analytics:** wellness activity and statistics.
- **Profile:** saved name, meditation/Unwind statistics, streak, weekly progress and preferences.

Technology

Flutter and Dart are used for the application and UI. Firebase/Cloud Firestore provides backend-related functionality. SharedPreferences provides lightweight local persistence for profile and progress data. Provider/ChangeNotifier supports shared state where required, while audioplayers handles audio playback.

Project Architecture

The application is divided into screens, reusable widgets, models and service classes. The general data flow is **User Action** → **UI** → **Service/Provider** → **Storage/Firebase** → **Updated Data** → **UI**. ProgressService centralizes meditation, Unwind, streak and weekly activity statistics so Home and Profile can display consistent information.

Team

Varun Pratap Singh — Team Leader: project coordination, overall integration, core Flutter development, ProgressService, Profile, Home integration and progress tracking.

Vansh Choudhary: Flutter development, planning/support and feature integration.

Vedant: mood tracking and Firebase/Firestore-related functionality.

Vivek Kaushik: meditation, Unwind and audio functionality.

Yash Thakur: UI components, Journal support, testing, documentation and presentation support.

GitHub Repository

Complete Project: <https://github.com/varunpratapsingh3252-design/mindcare/>

Outcome

MindCare demonstrates cross-platform mobile development, Flutter UI design, navigation, state management, local persistence, Firebase integration, audio playback and modular application architecture.

Future Scope

Potential improvements include cloud synchronization, stronger authentication, reminders, personalized recommendations, more audio content and advanced analytics.

Note: MindCare is a wellness/self-care application and is not intended to diagnose or treat medical or mental-health conditions.
